# Aid Ratio Calculation Methodology 

Market Value Aid Ratio (MV AR):

1 - ( $\left.\begin{array}{l}\text { School District Market Value / SD WADM } \\ \text { State Total Market Value / State Total WADM }\end{array} \quad * 0.5\right)$

Personal Income Aid Ratio (PI AR):

1 - ( $\begin{gathered}\text { School District Personal Income / SD WADM } \\ \text { State Total Personal Income / State Total WADM }\end{gathered} \quad * 0.5$ )

Market Value/Personal Income Aid Ratio (MV/PI AR):

$$
(0.6 * \mathrm{MV} \mathrm{AR})+(0.4 * \operatorname{PI~AR})
$$

a. MV/WADM and PI/WADM calculations are truncated to nearest dollar
b. District divided by State calculations are truncated at four decimals
c. When multiplying by 0.5 , truncate at four decimals
d. For MV/PI AR, when multiplying by 0.6 or 0.4 , truncate at four decimals

Market Value (MV): Sales value of taxable real estate as certified by the State Tax Equalization Board. The 2016 market value is used in the calculation of the market value aid ratio for payable year 2018-2019. Note: 'State Total' market value includes Clean \& Green.

Personal Income (PI): Personal income, excluding out-of-state income, reported on PA-40 income tax form. Data is certified by the Department of Revenue. The 2016 personal income is used in the calculation of the personal income aid ratio for payable year 2018-2019. Note: 'State Total' personal income includes out-of-state income.

Weighted Average Daily Membership (WADM): Calculated by weighting half-time kindergarten ADM at 0.5, full-time kindergarten and elementary ADM at 1.0, and secondary ADM at 1.36. The 2016-2017 WADM is used in the calculation of the aid ratios for payable year 2018-2019.
